Hello Everyone,

I am now using a Windows 10 Pro 64-Bit computer.
I restored my 9.5 version backup file into the TradeStation 10 Platform.
However, I realize that I also need to manually download the Global Variable zip folder

Please confirm if the following is correct ---

1) Global Variable version 2.3 is still the latest one that works in TradeStation 10.
 2) I download and extract the Global Variable folder into here ---
 C:\Program Files(x86)\TradeStation 10.0\Program
 3) In the list of items within the Program folder, I look for the file named
 "GlobalVariable.dll" and I cut and paste it into here, if it is not already present ---
 C:\Windows\SysWOW64
 Therefore, this "GlobalVariable.dll" file now appears only in the SysWOW64 folder.
 4) In the list of items within the Program folder, I look for the file named
 "GV2.3 Demo.tsw" and I cut and paste it into here, if it is not already present ---
 C:\Users\UserName\Documents\TradeStation 10.0\Workspaces
 Therefore, this "GV2.3 Demo.tsw" file now appears only in the Workspaces folder.
 5) Lastly, I open the TradeStation 10 platform and the Development Environment to c
 if the items within the "GV 2-3.ELD" file have already been restored.
 If I see many Functions beginning with GVGet and GVSet, then the "GV 2-3.ELD" has
 However, if these items are missing then I Import the "GV 2-3.ELD" file as follows ---
 File --- Import/Export EasyLanguage --- Import EL file (ELD,ELS or ELA) --- Next ---
 Browse to
 C:\Program Files(x86)\TradeStation 10.0\Program\GV 2-3.ELD
 Open --- Next --- Select All --- Next --- Select All --- Finish

Please advise if I am missing something here, regarding where the items should be p
 because I discovered that the TradeStation 10 platform has created new folders in ot

I did this many years ago, therefore I just need confirmation that I am remembering i
 steps correctly before proceeding further.

Thank you so much for your upcoming reply and have a great day.

survivor,

The steps appear correct. Try running TradeStation as Administrator (right click on the
 run as administrator). Also, try installing the Microsoft Visual C++ 2010 Redistributabl

Hello JohnR@TS,

Thank you for your confirmation and additional good suggestions.
However, I had already downloaded and installed the
Microsoft Visual C++ 2015 Redistributable Package (x86).
Which is of 2015 instead of 2010, therefore I hope this is fine.

Thank you so very much and may you enjoy a wonderful day.

JohnR@TS,

Yes, it is good to have updated Microsoft Visual C++ Redistributable Packages so all will work well and thank you so much for your expert suggestion here.

I just discovered that the restore did automatically import all the Global Variable Func that are contained in the GV 2-3.ELD file. Therefore, I did not need to Import this file.

Thank you kindly.

Steps on how to find the Global Variable 2.3 version zip file:

Type into the TradeStation Forum Search box ---

Global Variables 2.3 Download --- from the list, select Global Variables 2.3 Download

Scroll down and look for the following post ---

Posted by DaveC@TS at Posted - 08/08/2012 11:56:06

After you download the file to your computer,

rename the file without this at the end of it --- .png
In Windows 10
Right click on it and select --- Extract
